Thermosphere-Ionosphere- Electrodynamics GCM

The TIEGCM is a first-principles numeric simulation model of Earth's Thermosphere-Ionosphere system. The model uses a time-dependent finite-differencing method on a 3-d spatial grid to solve the fundamental equations of hydrodynamics, thermodynamics and continuity.

This talk will focus on:

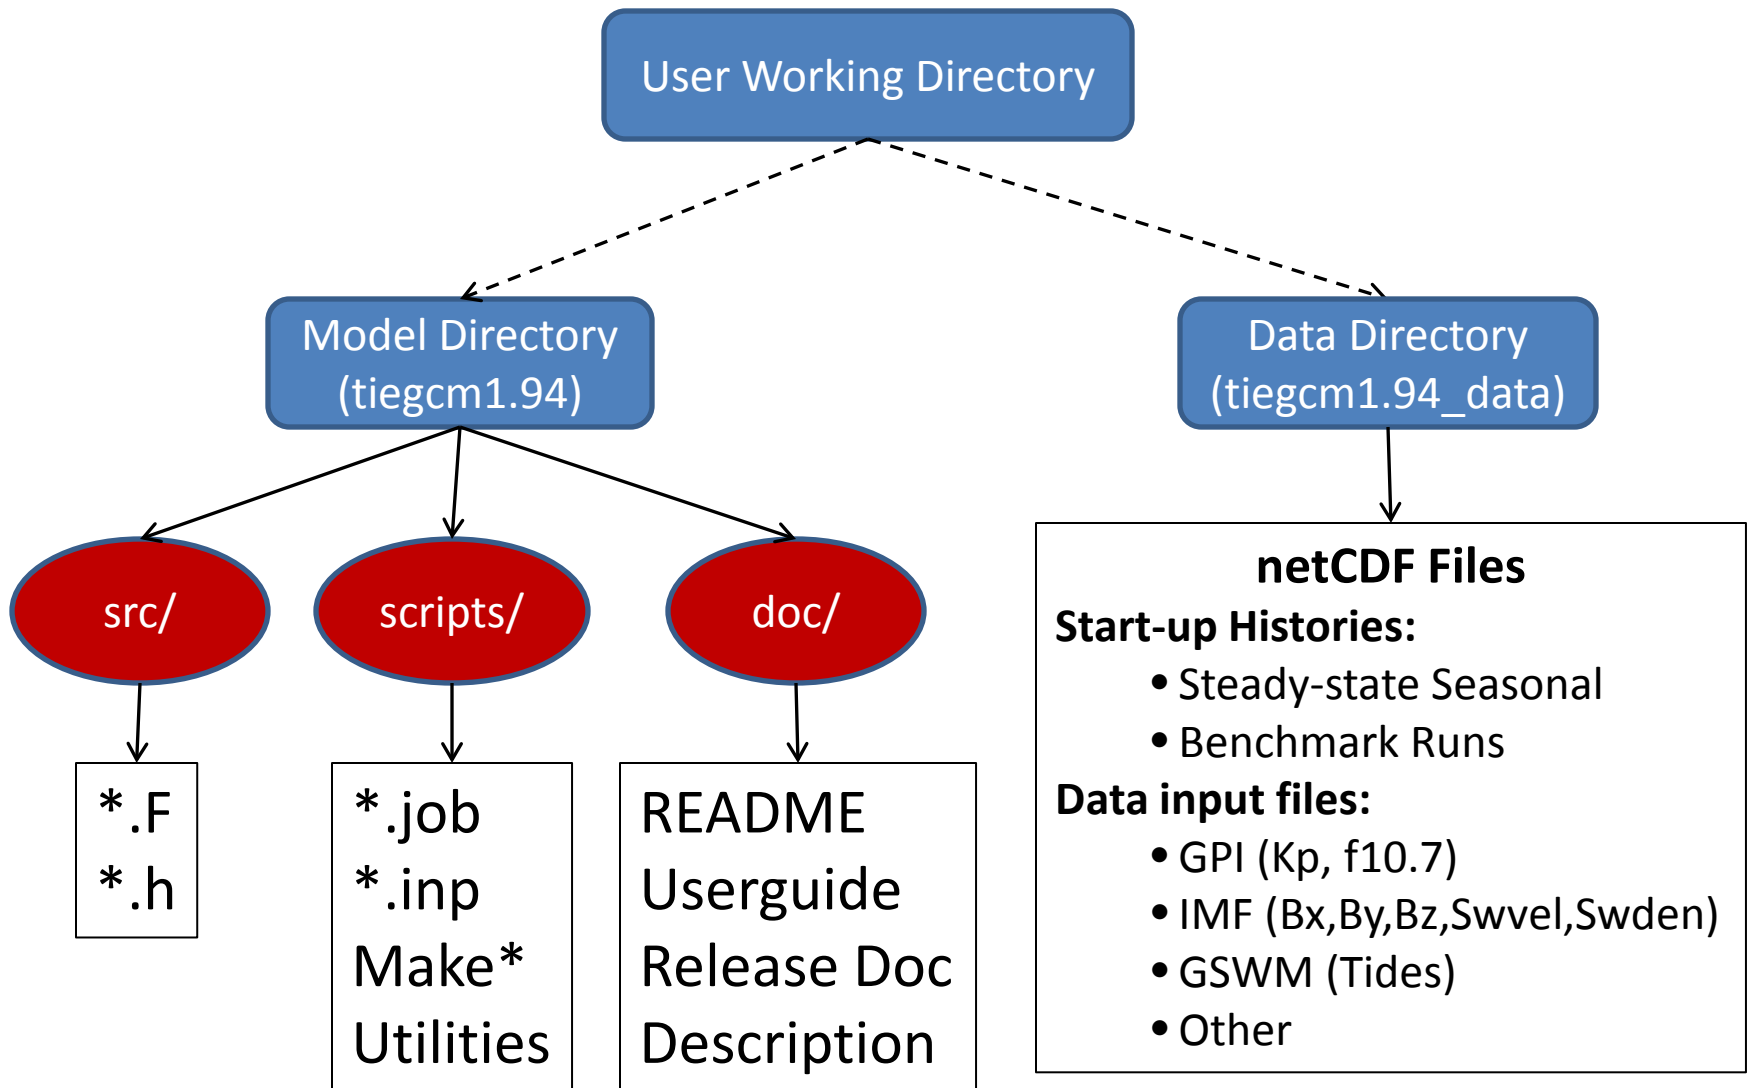

- Version 1.94, released June 3, 2011
- Selected results from the v1.94 Benchmark Runs
- Future development goals

For more information about the NCAR/HAO TGCM Models, please see <http://www.hao.ucar.edu/modeling/tgcm>

Summary of v1.94 Release Notes

- **Weimer 2005 Electric Potential Model**
 - For auroral parameterization and transition to high-latitude ion convection
 - Optionally driven by OMNI IMF data Bx, By, Bz, Swvel, Swden
 - See [Weimer Agreement](#), and [Weimer05 in the TIEGCM model](#)
- **New build/compile system (scripts directory)**
 - *Make.machine* files for platform-specific compilers and libraries
 - Support for Intel ifort/OpenMPI on 64-bit Linux systems ([Make.intel_hao64](#))
 - Simplified Makefile without platform-dependent conditionals
- **New module saves diagnostics to secondary history files**
 - 22 “sanctioned” diagnostic fields are available in v1.94 ([diags table](#))
- **Benchmark Runs by v1.94 are released for validation and testing**
 - Seasonal steady-state histories for model start-up (solar min and max)
 - Five-day control runs, started from the seasonal steady-state histories
 - Full year climatology (constant solar forcing)
 - Data-driven storm cases: dec2006, nov2003, whi2008
- **All new [User’s Guide](#), [Release Document](#), and [Model Description](#)**

TIEGCM Directory Structure

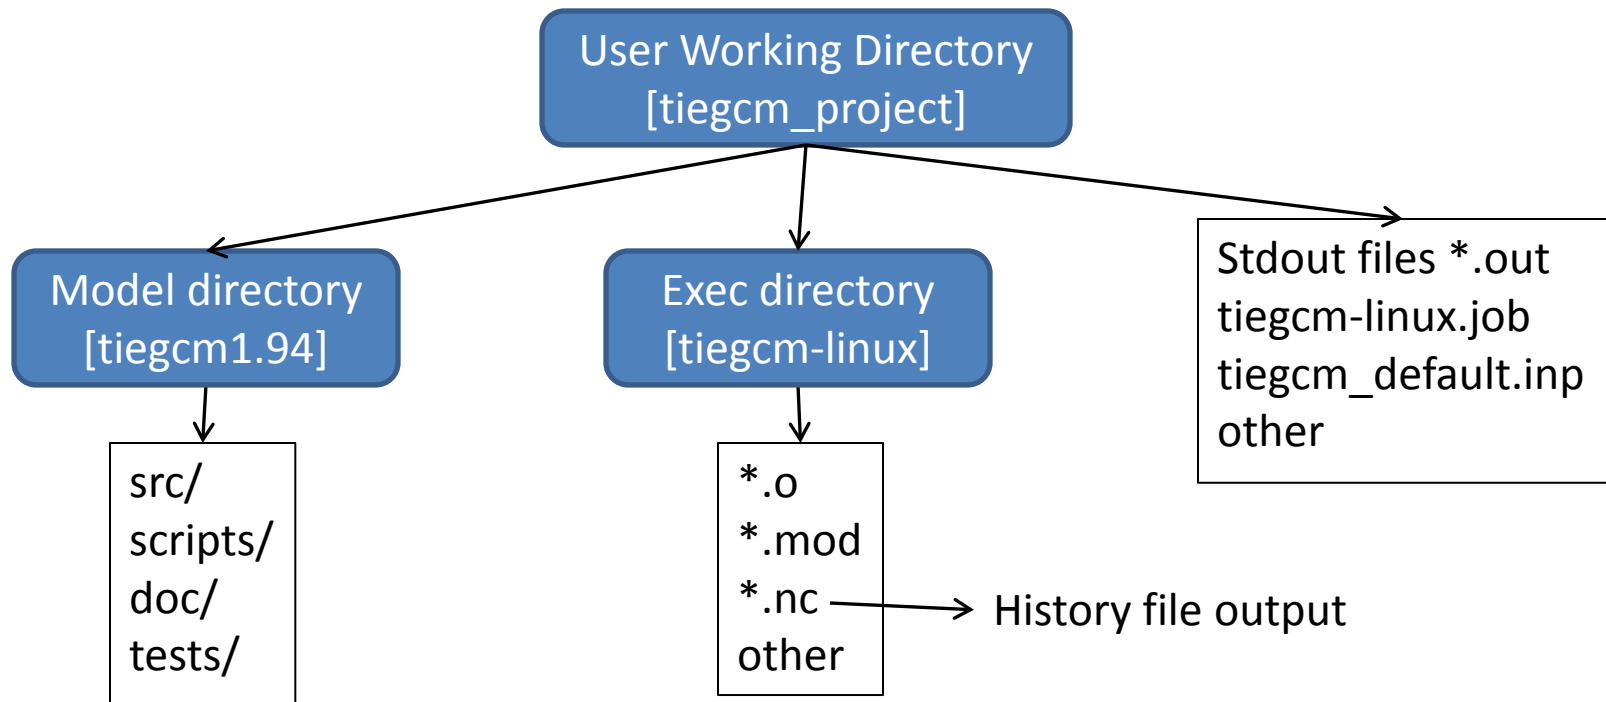

Quick-Start Procedure

see also [Quick-start chapter of the User's Guide](#)

Obtain and build the model, and execute a default run:

1. Download and extract model and data tar files ([download page](#))
2. Set modeldir and other shell variables in the job script [tiegcm-linux.job](#)
3. Set env var TGCMDATA to the data directory (.cshrc file or job script)
4. Execute by typing “tiegcm-linux.job &” (build and execute default run)
5. Rename and edit namelist input file [tiegcm_default.inp](#) for a new run

Selected results from a tiegcm1.94 Benchmark Run: November 19-23, 2003 Storm

These figures were made with post-processors
tgcmproc_f90 and tgcmproc_idl, both of which are
available on the TGCM download website

For more plots and movies of Benchmark Runs, please see
[tiegcm1.94 Release Document](#)
netCDF output files are available for download at the
[NCAR Community Data Portal](#)

Cross-Tail Potential (kV): Nov 19-23, 2003

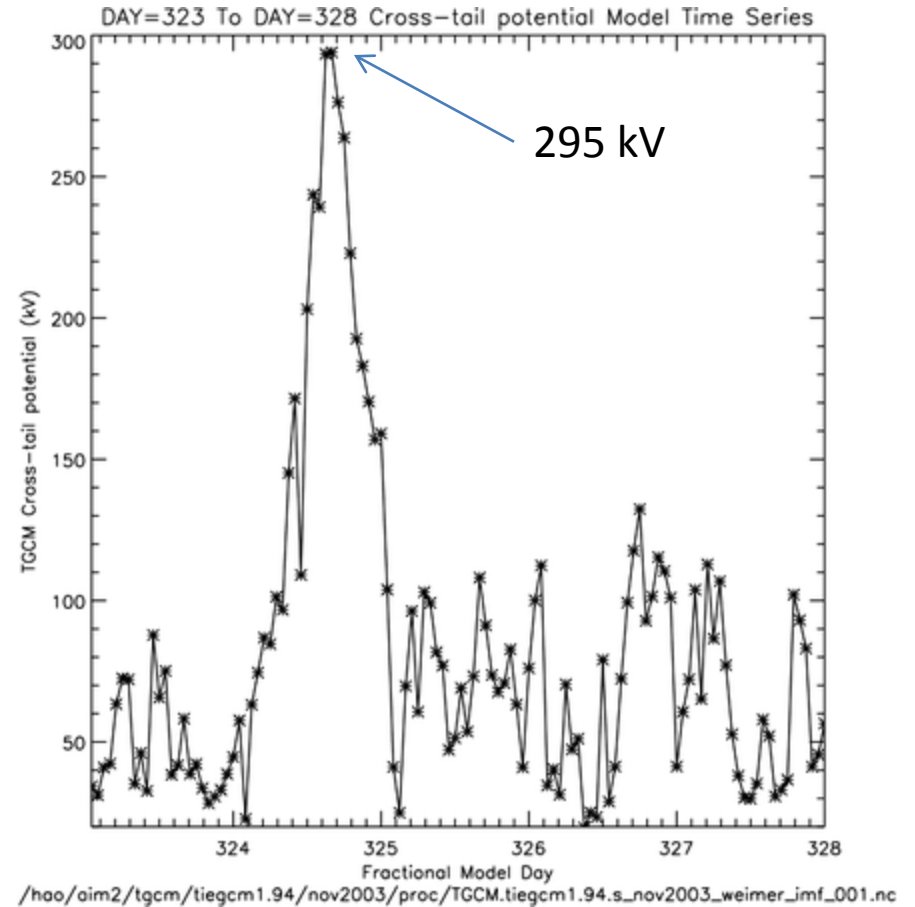

Heelis/GPI

Min,Max = 32, 206

$$\text{ctpoten} = 15 + 15 * Kp + 0.8 * Kp^2$$

Weimer/IMF

Min,Max = 20, 294

ctpoten = Cross-cap potential drop from Weimer model (hemispheric average)

Selected Results: tiegcm1.94 Benchmark Runs

November 19-24, 2003

Ut vs Zp: TN (deg K) at Latitude 60N

Heelis/GPI

NEUTRAL TEMPERATURE (DEG K)
LAT, LON= 57.50, 180.00

MIN,MAX= 1.6486E+02 1.4671E+03 INTERVAL= 1.0000E+02
FIRST: TGCM.tiegcm1.94.s_nov2003_heelis_gpi_001.nc
LAST: TGCM.tiegcm1.94.s_nov2003_heelis_gpi_005.nc

Min,Max = 165, 1467 Interval=100

Weimer/IMF

NEUTRAL TEMPERATURE (DEG K)
LAT, LON= 57.50, 180.00

MIN,MAX= 1.6367E+02 2.4677E+03 INTERVAL= 1.0000E+02
FIRST: TGCM.tiegcm1.94.s_nov2003_weimer_imf_001.nc
LAST: TGCM.tiegcm1.94.s_nov2003_weimer_imf_005.nc

Min,Max = 164, 2468 Interval=100

Selected Results: tiegcm1.94 Benchmark Runs

November 19-24, 2003

Ut vs Latitude: TN (deg K) at Zp +2

Heelis/GPI

Weimer/IMF

NEUTRAL TEMPERATURE (DEG K)
ZP = 2.000 LONGITUDE = 180.00

NEUTRAL TEMPERATURE (DEG K)
ZP = 2.000 LONGITUDE = 180.00

MIN,MAX= 8.3691E+02 1.7988E+03 INTERVAL= 1.0000E+02
FIRST: TGCN.tiegcm1.94.s_nov2003_heelis_gpi_001.nc
LAST: TGCN.tiegcm1.94.s_nov2003_heelis_gpi_005.nc

MIN,MAX= 8.2816E+02 2.2744E+03 INTERVAL= 1.0000E+02
FIRST: TGCN.tiegcm1.94.s_nov2003_weimer_imf_001.nc
LAST: TGCN.tiegcm1.94.s_nov2003_weimer_imf_005.nc

Min,Max = 837, 1800 Interval=100

Min,Max = 828, 2274 Interval=100

Global TN at Zp +2 (~350-450 km) Nov 19-24, 2003 (hourly frames)

Heelis/GPI

Weimer/IMF

Future Development (software)

- **Near-Term:**

- Validation and tuning of the 2.5 degree “double resolution” model
- Performance and scaling improvements (FFT, memory structure, etc.)

- **Mid-Term:**

- Parallel dynamo solver
- NetCDF 4.0 with parallel i/o

- **Ongoing and Long-Term:**

- Post-processing, visualization and analysis
- Continued Community Support (CCMC, University users)
- Further improvements to the User’s Guide and Model Description
- More frequent minor and intermediate releases of the source code?
